Thanks to South Texas during COVID-19

Telemedicine and curbside visits for patients

Heart Surgery during a pandemic

Romina
This little heart of mine, I’m gonna let it shine
We have seen the world change dramatically since the last issue of Driscoll Life. In that time, COVID-19 has made an impact in all our lives. Driscoll Children's Hospital has taken incredible measures to help prevent the spread of infection, and we continue to make sure everyone who walks through our doors is safe.

Driscoll remains on the frontlines of caring for the patients and families who turn to us each day. Our entire staff is employing best practices to keep our facilities safe and functional as we navigate through this unprecedented pandemic. The teamwork and support I have seen firsthand and heard about throughout our system and our community make me so proud. This too shall pass.

As you'll see in this issue, we look forward to providing care to children in our new Pavilion soon. Over the past five years, we've been working on an ambitious, strategic vision to advance pediatric healthcare in our region. We remain committed and focused to bring this vision to fruition. Plans are underway to celebrate this new chapter with you, while keeping you safe (see page 6).

Driscoll has weathered various natural disasters, including several hurricanes, throughout the years. Your generosity has allowed Driscoll to serve South Texas during past times of difficulty, and continues to do so right now. Thank you for the many ways you stand with us, whether it be through in-kind and monetary donations, words of encouragement or prayers. Your support is more important than ever.

As we move forward in these challenging times, I am grateful to work with such an outstanding team of healthcare professionals. We are here to serve and continue our legacy of providing compassionate, expert medical care to the children who need it most. Nothing is truly elective when it comes to children's care. Our commitment to our patients – and each other – remains constant, even in uncertain times.

Sincerely,

Eric Hamon, President and CEO
Driscoll Health System

Driscoll Health System announces refreshed branding

The refreshed branding elements for the Driscoll Health System include:

- **Mission**: Devoted to expert care, education, outreach and advocacy.
- **Vision**: Until all children are well.
- **Core Values**: Compassion, Advocacy, Respect, Excellence, Stewardship (CARES)
- **Logo**:

![Driscoll Logo]
These past few months have been tough for our communities and other areas of the world as the impact of the COVID-19 pandemic is being felt throughout.

As I find myself reflecting on the pandemic, I remain truly thankful for all of the good things that continue to take place at Driscoll Children’s Hospital. During the month of May, we celebrated the miracles that take place, thanks to the high quality of care provided at Driscoll and its many specialty clinics in South Texas.

One patient story that especially touched me was that of a four-month-old Cardiology patient who underwent heart surgery in mid-April during the early start of the pandemic. Her story is a testament that despite the uncertainties in the world, Driscoll continues to provide specialized medical care for South Texas children. Special thanks to KIII-TV and Children’s Miracle Network Hospitals for 35 years of winning partnerships.

Each and every day brings another miracle through the dedication and efforts of the entire staff, and the support of the community. It is truly a privilege to be associated with such an outstanding South Texas institution and to build upon the great work of those pioneering spirits, exemplified by our founder, Clara Driscoll.

It is with great sadness that I share the passing of one of those pioneering spirits – our beloved Trustee Emeritus Bernie Paulson. As one of the founders of our annual Fiesta de los Niños event, Bernie had a long relationship and lasting impact on the success of the hospital. His dedication and commitment to Driscoll’s vision remains unparalleled. His legacy is a reminder that the seeds we plant today will produce fruit for future generations to come.

It is an exciting new season to witness the largest expansion in the hospital’s recent history come to fruition. The new Pavilion will soon house a beautiful, expanded Pediatric Intensive Care Unit (PICU), a new outpatient surgery center and outpatient lab. The futuresbright campaign received outstanding support from many generous individuals, businesses, foundations and organizations. While we will not have a traditional ribbon cutting gathering, we hope to host a virtual celebration to share with you all soon.

I am humbly grateful for your continued generosity during these strenuous times, and the important role you play in our mission. Thanks to your support, Driscoll has a bright future ahead.

Diane Gates, President
Driscoll Children’s Hospital
Development Foundation Board
Laredo mother Leslie Salas arrived for what was expected to be a routine 20-week ultrasound. When the sonographer focused intently on the baby’s heart during the ultrasound, Leslie, expecting her third child, knew something wasn’t right.

“I was alarmed, but not entirely too much because I still didn’t understand what was going on,” said Leslie.

She was referred to Driscoll Children’s Hospital Maternal Fetal Medicine group for additional imaging. A fetal echocardiogram, or an ultrasound of the baby’s heart while still in the womb, confirmed Leslie’s baby had a rare, complex congenital heart defect.

“I have two other daughters who are healthy so I had no reason to think I would ever have to deal with something like this,” said Leslie. “It felt like my world was falling apart.”

The remainder of Leslie’s pregnancy was closely monitored by physicians in Laredo. On January 27, 2015, at 38 weeks, daughter Romina was born at a hospital in Corpus Christi and immediately transferred to the Neonatal Intensive Care Unit (NICU) at Driscoll Children’s Hospital.

Romina was born with multiple deformities in her heart, including a condition called hypoplastic left heart syndrome (HLHS). HLHS occurs when the left side of the heart does not completely form in utero, compromising the heart’s ability to effectively pump blood to the rest of the body.
At just 2 days old, Romina quickly underwent her first open-heart surgery – the Blalock-Taussig (BT) shunt, the first of three staged operations intended to correct the multiple deformities in her heart. In addition to the surgeries, she would also need multiple cardiac catheterizations.

“The first part of the staged surgeries – a modified B-T shunt procedure – allows more blood to be oxygenated by the lungs. This shunt is used in newborns but because the shunt does not grow with the baby, a second-stage surgery is needed,” said Driscoll Pediatric Cardiologist Mamata Eagam, MD.

Romina soon faced the second surgery of her young life – a Bidirectional Glenn procedure – May 14, 2015, at 3 months old.

“Being in the hospital for so long and going from one surgery to another was a test from God that has ultimately strengthened all of us,” said Leslie. “I did a lot of crying, and I was sad because I didn’t know if she was even going to live or not after her first surgery.”

Fortunately, Romina survived not one, but two successful surgeries. After two lengthy recoveries, Romina was finally discharged to go home in June. Once home, she continued to receive care from Driscoll’s High Risk Follow-Up Program, Nutritionist and Neurologist in Laredo.

Romina returned to Corpus Christi for her third surgery – the Fontan – in 2019.

“Thus far, Romina has tolerated all of her surgeries and is thriving,” said Dr. Eagam. “However, there are potential risks and complications that can be seen after the Fontan procedure. Due to these potential risks, Romina will have to be followed closely. If the Fontan fails over time, a heart transplant may need to be considered.”

Now 5 years old, Romina stays busy with appointments to her Cardiologist, which will continue into adulthood. As she grows, she’ll need adjustments and possibly more surgeries.

Leslie describes her daughter as a loving, happy and strong little girl who exudes strength and bravery, and loves to run! Romina is an inspiration to everyone, especially her team of specialists.

“We are extremely grateful for Driscoll,” said Leslie. “The care we received prenatally as well as after Romina’s birth was exceptional and made all of the difference.”

Pediatric Cardiology has come a long way in being able to perform complex surgeries in newborn babies. Dr. Eagam said “it’s a multi-team approach that involves Cardiothoracic Surgeons, Pediatric Cardiologists, Intensive Care Physicians, Nurses, Perfusionists, and of course the family.”

Although Romina’s heart will never be “fixed,” Leslie hopes and prays that with advanced medicine and the team at Driscoll, Romina has a long life ahead of her.
The new Pavilion at Driscoll Children’s Hospital is nearing completion with doors set to open in August.

Since its inception in 2016, the futuresbright campaign received outstanding community support.

“We are grateful to the generous individuals, businesses, foundations and organizations for helping us make the dream of the new Pavilion a reality,” said Martha Avery, CFRE, Vice President of Development, Driscoll Health System.

The 180,000-square-foot, five-story building will soon house 22 private Pediatric Intensive Care Unit (PICU) rooms, three state-of-the-art procedure suites, a satellite pharmacy, Day Surgery Unit and outpatient lab – each designed with families in mind.

Plans are underway to celebrate the Pavilion’s opening with a virtual ribbon cutting this summer. Follow Driscoll Children’s Hospital on social media so you don’t miss it!

Pavilion facts

- 258,000 lbs. exterior glass
- Equipment – 18,544 pieces of equipment
- Furniture – 800+ pieces of furniture
- Total sq. ft. – 170,000
- Construction completion – 6/30/2020
- TDH State Inspection – Aug. 3 – 7, 2020

We will begin relocation of the following departments with completion of construction:

- PICU, Satellite Pharmacy – 2nd – 3rd week in August
- Day Surgery, Outpatient Lab – 3rd – 4th week in August
Shelter-in-place and physical distancing measures during the COVID-19 pandemic required a rapid shift in the delivery of care at Driscoll Children’s specialty clinics.

To protect patients, their families and Driscoll staff from possible exposure to COVID-19, Driscoll’s clinics altered traditional patient care to virtual visits, reducing as much in-person patient traffic as possible.

Telemedicine, or the remote diagnosis and treatment of patients by means of telecommunications, is a tool that a handful of Driscoll physicians used prior to COVID-19 to be able to reach patients in the 31-county service area. It allows physicians to see and speak with their patients in real time within a private and secure environment, regardless of the distance.

Spurred by the urgency of the pandemic, Driscoll’s specialty clinics made the shift to telemedicine within a week, transitioning most of the scheduled in-person appointments to virtual visits. Telemedicine visits increased from 250 in February to over 6,000 virtual visits in April.

“Most of our satellite clinics were already set up with clinic-to-clinic telemedicine, which allowed us to implement the practice of telemedicine for new users within a few days,” said Director of Telemedicine Services Damaris Perkins.

Driscoll telemedicine has allowed patient care to continue without interruption, and in some cases, it has proven to be more effective. Driscoll’s Rehabilitation Department, the largest ancillary team at Driscoll, is implementing teletherapy for the first time and receiving positive feedback from patients and families.

“We have seen a lot of benefits with autism and sensory issues,” said Occupational Therapist Megan Turner. “Visits can sometimes be overwhelming, but when patients are in their home, they’re more comfortable in that space.”

Families also recognize the benefits of telemedicine healthcare.
visits allowing them to avoid travel and wait times, while receiving the care they need from the comfort and safety of their home. While some children may still need to be seen in-office, such as post-operative patients or babies who need feeding assistance, the majority of those patients needing rehabilitation services are using telemedicine. More than 1,400 patients visited virtually with their therapist or physician in May.

“Our telemedicine platform holds a HiTRUST certification, meeting HIPAA standards to the highest level,” said Perkins. In addition, Perkins adds, “Driscoll Health System has provided business Zoom accounts to ensure HIPAA compliance.”

Driscoll’s Rehabilitation team has employed other innovative ways to avoid interruptions in care, including curbside services for audiology patients. The Audiology staff created a curbside hearing aid service to support patients who may need maintenance or replacement of their hearing aids.

Among the many children helped is Jared, a 16-year-old who wears bilateral hearing aids. Without his hearing aids, Jared can only detect loud sounds. When his hearing aid malfunctioned, and troubleshooting over the phone was unsuccessful, Jared’s family took advantage of our curbside service. The Audiologist met the family outside and was able to fix Jared’s hearing aid in the hearing aid lab.

“The curbside service that Driscoll Children’s Hospital Audiology Department offers is wonderful,” said Jared’s mom. “It was efficient and very helpful. It was a relief to just drive up and drop his hearing aid off without worry. They fixed his hearing aid and brought it back to my car with minimal wait time. Thanks for the service, especially in these uncertain times.”

Director of Rehabilitation Services Susan Fields credits the collaboration of many departments across the Driscoll Health System for the successful transition from traditional visits.

“We are grateful to be a part of an organization that trusted we could provide a different model of care to our children, during a time when many other organizations are downsizing their ancillary services,” said Fields.

Be it through traditional means or the advanced technology of telemedicine, Driscoll Children’s Hospital is committed to our goal of providing more care for more kids.

“More than 1,400 patients visited virtually with their therapist or physician in May.”
Before Carolina was born, at nearly 20 weeks, doctors discovered an anomaly in her heart at a routine sonogram. Carolina’s mother Alejandra Gomez was referred to Pediatric Cardiologist Ngozi Agu, MD, and the medical team at Driscoll Children’s Medical Plaza – McAllen to discuss her condition.

Advanced fetal imaging showed Carolina had two holes in her heart. She also had an artery that should have closed after she was born but remained open; all of which inhibited Carolina’s ability to grow.

“Carolina was not gaining weight,” said Dr. Agu. “She was feeding at really high calories through an NG Tube and still wasn’t thriving.”

Dr. Agu insisted on having Carolina evaluated by Pediatric Cardiac Surgeon Stephen Langley, MD, in hopes that he could repair her heart, despite the COVID-19 pandemic.

“With COVID-19, at Driscoll we are able to continue doing heart surgeries on kids that needed it, like Carolina,” said Dr. Langley. “Carolina had the holes in her heart, but the main problem was she wasn’t growing. She wasn’t able to eat properly.”

Carolina’s mom said she’s grateful that Driscoll was able to perform the surgery her daughter desperately needed.

“I felt really good when they called me and they told me that,” said Alejandra. “When they told me they were going to try to find a space for her, because of everything with the virus going on I felt a little bit depressed, but since they told me it was important and that she could get it done, I got very excited when I got the news.”

Dr. Langley repaired the holes in Carolina’s heart in a successful operation, lasting about three hours. During the procedure, a cardiopulmonary bypass machine (or heart-lung machine) run by a highly skilled perfusionist, kept the blood and oxygen circulating throughout Carolina’s fragile body.

All that remains now are a few tiny scars.

“The remarkable thing having fixed Carolina’s heart is that we were able to remove the feeding tube and she has been able to gain weight and take everything by mouth which she had never been able to do before the heart surgery, said Dr. Langley.”

“With COVID-19, at Driscoll we were able to continue doing heart surgeries on kids that needed it, like Carolina,” said Dr. Langley. “Carolina had the holes in her heart, but the main problem was she wasn’t growing. She wasn’t able to eat properly.”

“I love Driscoll. Every doctor, everybody in PICU. They made me feel very comfortable,” said Alejandra. “Before, Carolina looked like a different baby. Now, it’s like I have another baby at home. She looked nothing like this. She wouldn’t smile. It’s a totally different baby. She’s my blessing.”

Thanks to the doctors and clinical staff at Driscoll, it will mostly be routine visits to the doctor for Carolina from here on out.

“It’s an incredible feeling to be able to help a patient like Carolina go from being very unwell and not thriving to going through a surgery successfully without any complications, and recovering and being able to go back to her family, it’s an amazing feeling for me as a surgeon and an incredible privilege to be able to do that, said Dr. Langley.”

Meet Carolina

Four-month-old Carolina Olvera underwent heart surgery at Driscoll Children’s Hospital April 8, 2020, during the COVID-19 pandemic.

Alejandra Gomez and daughter Carolina (from left); and Pediatric Cardiac Surgeon Stephen Langley, MD.

“She’s doing fantastic,” said Dr. Agu. “She’ll continue with post-operative follow up visits but she shouldn’t need any other interventions down the road.”

Alejandra still gets emotional talking about Carolina’s heart problems as a newborn. The team at Driscoll, she said confidently, made her feel at ease.

“With COVID-19, at Driscoll we were able to continue doing heart surgeries on kids that needed it, like Carolina,” said Dr. Langley. “Carolina had the holes in her heart, but the main problem was she wasn’t growing. She wasn’t able to eat properly.”
It is with deep gratitude that we thank our friends across South Texas for their gifts to Driscoll Children’s Hospital.

AEP Foundation donates $150,000 to High Risk Follow-Up Program

Driscoll received $150,000 from the American Electric Power (AEP) Foundation to support the High Risk Follow-Up Program in Laredo, Harlingen and Corpus Christi. Neonatal Intensive Care Unit (NICU) patients often transition into the High-Risk Follow-Up Program to ensure they’re meeting developmental milestones and progressing both mentally and physically. The program’s mission is to ensure every infant is given a chance to live their best life.

Prichard Family Foundation approves grant for Heart Program

The Prichard Family Foundation approved a $100,000 grant for Driscoll’s Heart Program. The funds will go toward a $2.3 million project to enhance the Heart Program and its growing services to care for infants and children with congenital heart problems in South Texas.

Valero Energy Foundation announces $250,000 gift to Driscoll

The Valero Energy Foundation presented a $250,000 gift to the Heart Program at Driscoll Children’s Hospital, in support of its growing services to care for infants and children with heart defects and disease in South Texas.

“On behalf of the entire Driscoll Health System, I cannot thank the Valero Energy Foundation and the local Valero team enough for their overwhelming support to our cardiology and cardiovascular surgery program. Philanthropy plays a pivotal role in the level of resources we can provide to our medical staff in caring for the children of South Texas. We are humbly grateful for your belief and commitment in our mission,” said Lee Budin, MD, Chief Medical Officer, Driscoll Health System.

The Valero Energy Foundation also donated $25,000 toward COVID-19 relief efforts, as part of a $1.8 million commitment to support organizations helping people in need during the pandemic.

A gift from the Auxiliary

The Auxiliary to Driscoll Children’s Hospital made a significant contribution to Driscoll’s Heart Program. The $100,000 donation for Driscoll’s Heart Program will help bring in additional medical staff and technology, including the purchase of a heart-lung machine, Echocardiography and Cardiac Catheterization Lab equipment.

“On behalf of the Auxiliary, we are so proud to be able to be a part of this new project,” said Auxiliary President Marihelen Boyd. "The volunteers work hard to have the resources to help Driscoll."

Lee Budin, MD, Chief Medical Officer, Driscoll Health System; and Dennis Payne, Vice President and General Manager, Valero Bill Greehey Refineries.
The 28th annual Fiesta de los Niños fundraiser for Driscoll Children’s Hospital grossed over $840,000 for the children of South Texas. More than 1,500 people showed up to support Driscoll’s mission at the American Bank Center on Jan. 24.

Funds raised will support the Heart Program at Driscoll, including the purchase of a new pediatric heart-lung machine, diagnostic fetal imaging equipment and upgrades to electrophysiology and cardiac catheterization equipment.

There are many committee members, volunteers and charitable supporters who contribute to Fiesta de los Niños year after year. The generosity of long-time title sponsor Flint Hills Resources, and the hard work of all those involved has helped contribute to the health and well-being of the children of South Texas.
Fiesta de los Niños Chairs Jeremy and Alice Evans (from left); Diana and Trey Summers

Light Up the Night

‘Light Up the Night’ is a special pledge campaign at Fiesta de los Niños that gives attendees the opportunity to respond to an appeal with an individual donation toward a specific need. Funds raised through this year’s ‘Light Up the Night’ campaign went toward Driscoll’s Critical Care Transport Team.

The Critical Care Transport Team travels thousands of miles throughout South Texas each year. Each ambulance is equipped to serve as a mobile intensive care unit, enabling paramedics, nurses and respiratory therapists to provide critical, life-saving care throughout the entire transport process.

Your support ensures the team has the most up-to-date equipment on board to help our patients arrive safely to Driscoll, and with the best care possible. By the end of the night, over $39,500 was raised!

Driscoll’s Radiology Department receives new CT scanner

Driscoll’s Radiology Department received a new, state-of-the-art CT (computed tomography) scanner to provide quicker and better diagnostics for patients. The funds raised for this equipment – over $1.5 million – makes a critical difference in Driscoll obtaining this advanced technology and equipment.

“The key and most amazing innovation is the speed of the rotation and the post processing of data,” said Director of Radiology Ernest Chavez. “The system is capable of scanning the heart in one rotation and one breath hold.”

Thank you to all of the 2019 Fiesta de los Niños supporters, and those who contributed to making this critical piece of equipment available to the children in South Texas.

Save the date!

The 29th Annual Fiesta de los Niños is scheduled for February 5, 2021, with a backup date on hold for June 11, 2021.
Driscoll Children’s Hospital has always relied on community support, and during this challenging time, we see our incredible communities continue to support our healthcare heroes. From each physician and employee at Driscoll – Thank you!

As of May 1, 2020
Driscoll welcomes new physicians

Andrea Harris, MD
Andrea Harris, MD, has joined the staff of Driscoll Children’s Hospital as a Pediatric Cardiologist.
Dr. Harris received her medical degree from the University of Texas Health Science Center in San Antonio, Texas. She completed her Residency in Pediatrics at the University of Texas Health Science Center in San Antonio, Texas. Dr. Harris completed her Fellowship in Pediatric Cardiology at the University of Texas Health Science Center in Houston, Texas.
She is board certified by the American Board of Pediatrics.

Troy Creamean, DO, FAOCO
Troy Creamean, DO, FAOCO, has joined the staff of Driscoll Children’s Hospital as a Pediatric Otolaryngologist.
Dr. Creamean received his medical degree from the NOVA-Southeastern Universities of the Health Sciences, North Miami Beach (NMB) in Davie-Fort Lauderdale, Florida. He completed his Residency in General Surgery-PGY-2 and Otolaryngology & Facial Plastic Surgery at the Genesys Regional Medical Center-Michigan State University in Flint, Michigan. Dr. Creamean completed his Fellowship in Head and Neck Oncology Surgery & Microvascular Plastic Reconstructive Surgery at Indiana University in Indianapolis, Indiana.
He is board certified by the National Board of Osteopathic Medical Examiners and the American Osteopathic Board of Ophthamology & Otorhinolaryngology.

Valeria Munguía Jovel, MD
Valeria Munguía Jovel, MD, has joined the staff of Driscoll Children’s Hospital as a Pediatrician.
Dr. Munguía received her medical degree from Escuela Autónoma de Ciencias Médicas de Centro America in San Jose, Costa Rica. She completed her Residency in Pediatrics at Driscoll Children’s Hospital in Corpus Christi, Texas.
Dr. Munguía is board certified in General Pediatrics by the American Board of Pediatrics.

Steven Solis, DDS
Steven Solis, DDS, has joined the staff of Driscoll Children’s Hospital as a Pediatric Dentist.
Dr. Solis received his dental degree from the Texas A&M Health Science Center: Baylor College of Dentistry in Dallas, Texas. He completed an AEGD Residency at the New York University Lutheran Medical Center – Holyoke in Holyoke, Massachusetts. Dr. Solis completed a Residency in Pediatric Dentistry from University of Texas Health San Antonio – Laredo.
Planned giving

A lifetime of possibilities for children

Each year, it is the generous spirit of friends that makes our work possible. This generosity is evident in countless ways, including gifts of financial support.

In what way would you like to support Driscoll Children’s Hospital? Working with you and your professional advisors, we can tailor gift plans to fit your specific needs, assets and goals. A charitable bequest in your will, or revocable trust, allows you to invest in future generations of care at Driscoll Children’s Hospital without affecting your cash flow during your lifetime.

Include Driscoll in your will or trust – either a specific amount, percentage, specific property or asset, or remainder/percentage of remainder – and ensure future generations of South Texans receive high quality healthcare.

Benefits

• You maintain control of your assets.
• If your situation changes, you can revise your will at any time.
• You can claim unlimited estate tax deductions for your bequests.

What to consider

• If you’ve already written your will, you can easily amend it with a simple document called a codicil prepared by your attorney.
• Donating the remaining balance of your retirement plan makes for a tax-wise gift. To avoid including such a plan in your taxable estate, we recommend using your successor beneficiary form to name Driscoll Children’s Hospital your beneficiary rather than including the plan in your will.

Please contact the Driscoll Children’s Hospital Development Foundation at (361) 694-4394 if:

• You intend to bequeath real estate, a business interest or other specialized property to Driscoll Children’s Hospital.
• You need help structuring your bequest to support a specific program or purpose.
• Would like more information on other planning options.
